

Binary counter: main program

One completed press and release adds 1. The counter cycles from 0 to 31.

displayCount(): choose each LED

Called once at startup, then after each increment or reset.

Each loop iteration uses the same position in the LED array.

i (bit index)	0	1	2	3	4
LED pin	D12	D11	D10	D9	D8
Position value	1	2	4	8	16

Example: counter = 13 lights the 8, 4, and 1 positions (01101).
